

A NEW CLIENT FOR CEFA AVIATION: JIN AIR

THE SUBSIDIARY OF KOREAN AIR WILL NOW USE THE LEADING FLIGHT ANIMATION SOFTWARE CEFA FAS TO GUARANTEE FLIGHT SAFETY AND ENHANCE PILOT TRAINING

Colmar, July 25th, 2018

Based in Seoul, the low-cost carrier (LCC) decided to use the software CEFA FAS ([Flight Animation System](#)) for its safety department. It will allow to animate the data of its 30 aircraft.

[Jin Air](#) operates a network of services within South Korea and Asia out of its main base at Seoul Incheon International Airport. It is the first domestic LCC in Korea to deploy and operate the Boeing 777-200ER. In total, the airlines owns 4 B777-200ER and 24 Boeing 737-800. With this fleet, the subsidiary of Korean Air operates flights to 6 domestic cities and 26 international destinations, also operating cargo services since November 2013. It has been continuously expanding its international routes including Japan, China, and Southeast Asia, and launched its first long haul route, between Incheon and Honolulu, in December 2015.

“Innovation and technology are the key factors that have fueled South Korea’s economic rise over the past decades. Jin Air illustrates this mindset, as the first LCC to take off on long-distance routes. We, at CEFA Aviation, feel close to this. We constantly invest in R&D and in new developments. So we are more than happy to acquire Jin Air among our clients,” says Dominique Mineo, CEO and founder of the software company.

“Jin Air makes safety a top priority and considers safety the most important factor in air travel. Jin Air will continue to invest in our safety, by strengthening our training and education through our safety operations,” says Jin Air CEO, Jung-ho Choi. Now CEFA FAS allows to better understand the causes of incidents, consequently having a positive impact on risk management. According to Park Hyun Su, Director of Safety & Security Department: “We like the variety of features included in the software that enhances the communication within the airline. Among others, we like the possibility to overlap the trajectory of a plane and the nav chart. The animation video created through the software is a very realistic and helpful basis for pilot training.”

About us

CEFA Aviation, a privately held French company, enhances pilot training and flight safety, developing world-leading 3D animation software and services for the past 18 years. The innovative solutions developed by its experts recreate flights with high detail and accuracy based on data from aircraft flight recorders.

More than 80 major and regional airlines, cargo operators and investigative authorities on five continents are using the core software of the company, CEFA FAS (Flight Animation System) for pilot training and safety analysis.

Translating flight data into precise visualization requires in-depth understanding of the complexity of aircraft systems and software engineering. CEFA Aviation has been a pioneer in easy-to-use flight data animation since Dominique Mineo founded the company in 2000. Its long-lasting success is attributable to a passion for aviation and innovation, listening to its clients, and delivering gold-standard support. The CEFA Aviation team is headquartered in the Alsace region of France.

At the Dubai Airshow, CEFA Aviation unveiled a new breakthrough visualization tool to further enhance and personalize pilot training.

Jin Air Co. Ltd is the low-cost airline subsidiary of Korean Air, based in Seoul, with Jeju and Busan serving as the carrier's secondary hubs. It was established in 2008. Jin Air operates flights to 6 domestic cities and 26 international destinations and launched its first long haul route, between Incheon and Honolulu, in December 2015. It has operated cargo services since November 2013. Jin Air has grown into the most appreciated and representative Low Cost Carrier (LCC) and was named the No. 1 LCC in terms of annual passenger share for 4 consecutive years (2013-2016) for the Gimpo - Jeju flight, which is one of its main domestic routes. Its mindset is "Fly, better fly".
